Job ID REQ-10013615 Juli 24, 2024 Spanien

Summary

At Novartis, with Radioligand Therapies (RLT), our mission is to transform lives through radioligand therapy in nuclear medicine to fight several leading types of cancer. How will we continue to be on the cutting edge of medicine?

We believe new groundbreaking solutions can be found at the intersection of medical science and digital innovation. That a diverse, equitable and inclusive environment inspires new ways of working.

We believe our potential can thrive and grow in an unbossed culture underpinned by integrity, curiosity and flexibility. And we can reinvent what's possible, when we collaborate with courage to aggressively and ambitiously tackle the world's toughest medical challenges. Because the greatest risk in life, is the risk of never trying!

Imagine what you could do here at Novartis!

About the Role

The ITOT Automation Engineer will be required to oversee the OT scope of Semi-automated and Automated lines being deployed and operated across the RLT Network. In this role, will oversee a team of Automation Specialists responsible for managing the automation and computer system validation for an automated manufacturing line used in radioligand therapies.

The successful candidate will be responsible for ensuring the smooth operation of the OT scope of the automated lines across the network, managing the team effectively, and coordinating with cross-functional teams both locally and globally. Strong communication and leadership skills are required, as the Automation Engineer Lead will be responsible for interacting with the automated line vendor and ensuring that timelines and service level agreements (SLAs) are met.

Key Responsibilities

• Automation Specialists responsible for the operation and maintenance of an automated manufacturing line for radioligand therapies. Coordinate with cross-functional teams, both locally and globally, to ensure smooth operations and efficient collaboration.

• Oversee the OT and computer system validation processes to ensure compliance with regulatory requirements and industry best practices.

• Interact heavily with the automated line vendor to ensure timely delivery, effective troubleshooting, and adherence to SLAs. 1/4

• Develop and implement strategies to optimize the performance, reliability, and efficiency of the OT systems used on the automated manufacturing lines. Collaborate with stakeholders to identify and address any issues or challenges related to the automation and computer system validation processes.

• Provide technical expertise and guidance to the team, ensuring their continuous professional development and growth. Monitor and analyse key performance indicators (KPIs) to identify areas for improvement and implement appropriate corrective actions.

• Stay up to date with industry trends, advancements, and regulations related to automation in radioligand therapy manufacturing.

Role Requirements

• Bachelor's degree in Engineering, Computer Science, or a related field. Advanced degree preferred.

• Proven experience in managing teams in an automation or manufacturing environment.

• Strong knowledge and understanding of automation systems, computer system validation, and regulatory requirements in the pharmaceutical industry.

• Proficient in project management methodologies and tools.

• Excellent communication and interpersonal skills, with the ability to effectively collaborate with crossfunctional teams.

• Strong leadership and decision-making abilities. Detail-oriented, with excellent problem-solving and analytical skills.

- Ability to thrive in a fast-paced, dynamic environment.
- Knowledge of radioligand therapy manufacturing processes and equipment is a plus
- Fluency in English written and verbal, is required for this role
